

25/01/08

## Section Meeting

CNGS: Radiation results:

TCV4 = reduction factor  $\approx 10^3$   
TSG4 =  $\approx 10^4$   
with 2.4 m shielding

⇒ move electronics from TCV4 → TSG4 as possible

⇒ Mandi 29.01.08: VIC for TS/CE & TS/CV

⇒ Stripline test:

- start installation Mandi PM
- tests in Wednesday full day

⇒ test with camera, existing rules  
- inform CCC

- important number to set: maximum displacement after heat-up, i.e. > 2h of operation

- test with reflector first, move it time allow to the heavy.

⇒ Shielding

- block order ready to go
- shielding TSG4: 2.4m long

⇒ check RP constraints for the TCCV blocker  
- package; maintenance etc...

Est: - 3 magnet Q120 arrived; meeting to decide if will be installed before startup

- CLOUD needs to be installed and take beam this year

- Magsneville's speak to start...

MERIT: - US colleagues at CERN from Monday 4.2.08

→ North Area: • XTDV maintenance: H6, H8  
H4 completed

- ECN3 dump: NAG0 completed
- COMPASS modifications for visits down
- NA49 calo: still to find a solution for the dismantling
- FCC2: check supply of material
- Cleanup of K12 material

→ TMG point to find @ CERN, TD section
